Average Daily Steps by Day of Week

Average Daily Steps by User Activity Segment

Daily Steps vs Subsequent Sleep Duration

Key Insights

Tuesday activity dip
Tuesday recorded the lowest average activity at 4,915 steps, compared with a weekly high of 7,511 on Wednesday.

Large behavioral differences across users
The highest-activity segment averaged 12,506 daily steps and 41.8 very-active minutes, compared with 1,814 steps and 2.5 very-active minutes in the lowest segment.

Activity does not strongly predict sleep
Daily steps and subsequent sleep duration showed only a weak negative correlation (r = -0.218) across the matched sample.

Activity–sleep relationship
Daily steps showed only a weak negative relationship with subsequent sleep duration (r = -0.218). Activity level alone does not appear to strongly explain sleep duration in this sample.

Scope: Fitbit records from March–April 2016. Activity–sleep analysis includes 171 matched user-days across 20 users.
